## DETAILED ACTION

### *Election/Restrictions*

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, drawn to a method for computing optical performance monitoring information, classified in class 398, subclass 26.
  - II. Claims 9-14, drawn to an optical add/drop multiplexer, classified in class 398, subclass 83.
2. Inventions I and II are directed to related optical performance monitoring. The related inventions are distinct if the inventions as claimed do not overlap in scope, i.e., are mutually exclusive; the inventions as claimed are not obvious variants; and the inventions as claimed are either not capable of use together or can have a materially different design, mode of operation, function, or effect. See MPEP § 806.05(j). In the instant case, invention I addresses a method for performance monitoring in a network, specifically computing an OSNR value, but does not mention or require an add/drop multiplexer. Invention II addresses an add/drop multiplexer that has performance monitor cells, but does not mention or require any specific type of performance monitoring or method of computing performance monitoring information.
3. Because these inventions are independent or distinct for the reasons given above and have acquired a separate status in the art in view of their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2613

4. Because these inventions are independent or distinct for the reasons given above and the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.
